KVH mini-VSAT Broadband℠
CommBox™ Ship/Shore
Network Manager Software Bundles

Advanced options for network management – subscribe to a **CommBox Service Bundle**

Every TracPhone® HTS-series Integrated CommBox Modem (ICM) has a built-in CommBox Network Manager – the powerful network management tool used by thousands of ships worldwide. CommBox Service's are offered in two bundle configurations:

The **Standard Bundle** provides least cost routing and connection-specific firewall rules, as well as web caching and compression.

With the **Enterprise Bundle**, CommBox controls data on the vessel and landside prior to transmission over the satellite network, thereby allowing you to fully manage the data being sent to and from your vessels. It makes it easy to set up the most advanced crew usage allocations, to automatically enforce company rules about time spent online, to "whitelist/blacklist" websites and protocols, and to implement other security features, café services, roaming email, and unique firewalled networks for operations and crew.

Contact KVH's Application Engineering Team (appeng@kvh.com) to design the best solution for your business.

CommBox Ship/Shore Network Manager Software Bundles
